destroevi4.github.io/portfolio

I design playable cities and maps. I worked on the city for Russian Car Drift in Unity and develop BRESH, my own multiplayer FPS, in Unreal Engine. My level-design approach draws on experience in architecture and transport planning.

Skills & tools

Level design: Design of playable cities and maps, blockouts, routes and navigation, scale and sightlines, environment assembly.

Engines: Unreal Engine, Blueprints, UMG; Unity.

3D & architecture: Rhino 3D, Grasshopper, Revit.

Graphics & video: Photoshop, Illustrator, Figma, Premiere Pro, After Effects.

Game development experience

BRESH

Game creator · Game & Level Designer · independent project · Spring 2023 — present

- Designed all maps for a multiplayer FPS: routes, spawn positions, flanking paths and vertical connections built around switching between two worlds.
- Work on gameplay mechanics, bot behaviour, and visual and audio cues that help players understand the match.
- Assemble environments using third-party assets and develop interfaces with UMG and Blueprints. Work on PC, iOS and Android versions alongside another developer.

Russian Car Drift (RCD)

Level Designer · Unity · September 2023 — April 2024

- Designed and assembled a playable city: urban blocks, road network, courtyards, terrain and landmarks.
- Set street dimensions and corner geometry, testing routes through driving and drifting. Used Grasshopper to create terrain.
- Worked on winter environments, lighting and a second map featuring a village and bridge connected to the city.

Architecture & media

StopGame

Video author · March 2025 — present

- Create videos analysing game-city architecture: layouts, navigation, real-world references and how spaces support gameplay.

Transport project presentation videos

Direction, editing & visual effects · 2023

- Almaty and Tashkent: structure, storyboarding, direction, editing and effects for transport project films. Also filmed the Almaty project.

Independent architectural projects

Architect · Transport Planning · 2018 — 2023

- Designed streets, squares, pedestrian connections and transport layouts; prepared diagrams, sketches and visualisations.
- Worked on a square in Noyabrsk, a district concept in Krasnodar and the PRPR street and square proposals. Provided project consulting in Noyabrsk and Blagoveshchensk, Bashkortostan.

Transport Design Studio (STEP)

Architect · 2017 — 2020

- Urban analysis, transport layouts, 3D modelling and visualisation; aerial photography and parametric modelling with Grasshopper.

Lozinsky & Partners

Architect · 2015 — 2017

- Concept design, construction documentation and 3D visualisation.

ASK Dominante

Architectural Technician · 2014 — 2015

- BIM modelling and construction documentation.

Education

Moscow Film School

Filmmaking · Short-form Directing · 2017 — 2022

Moscow Architectural Institute (MARCHI)

Bachelor’s degree in Architecture · 2011 — 2016

English

Technical documentation and written communication; intermediate spoken communication (self-assessed).
